14. Nonzero initial velocity. Find the deflection u(x, t) of the string of length $L = \pi$ and $c^2 = 1$ for zero initial displacement and "triangular" initial velocity $u_t(x, 0) = 0.01x$ if $0 \le x \le \frac{1}{2}\pi$, $u_t(x, 0) = 0.01(\pi - x)$ if $\frac{1}{2}\pi \le x \le \pi$. (Initial conditions with $u_t(x, 0) \ne 0$ are hard to realize experimentally.)

Vi har her funktionen U

Eftersom at strengen ikke har noget udsving til t=0, men bare en hastighed kan vi finde u(x, t) som

$$U(x_1+) = \sum_{n=1}^{\infty} \beta_n \cdot Sin(\frac{n\pi}{L}x) \cdot Sin(\frac{n\pi}{L}x)$$

Her kan vi finde n som:

$$B_n = \frac{2}{c_{n\pi}} \cdot \int_0^L g(x) \cdot \sin(\frac{n\pi}{L}x) dx$$

Her er g(x) start hastigheden på snoren

$$B_{n} = \frac{Z}{cn\pi} \left(\int_{0}^{2\pi} \frac{1}{2\pi} x \cdot \sin\left(\frac{n\pi}{L}x\right) dx + \int_{0}^{\pi} \frac{1}{2\pi} x \cdot \sin\left(\frac{n\pi}{L}x\right) dx \right)$$

$$B_{n} = \frac{Z}{cn\pi} \left(\int_{0}^{2\pi} \frac{1}{2\pi} x \cdot \sin\left(\frac{n\pi}{L}x\right) dx + \int_{0}^{\pi} \frac{1}{2\pi} x \cdot \sin\left(\frac{n\pi}{L}x\right) dx \right)$$

$$C_{n} = \frac{Z}{cn\pi} \left(\int_{0}^{2\pi} \frac{1}{2\pi} x \cdot \sin\left(\frac{n\pi}{L}x\right) dx + \int_{0}^{\pi} \frac{1}{2\pi} x \cdot \sin\left(\frac{n\pi}{L}x\right) dx \right)$$

Vi løser her integrallet:
$$\int_{X} \cdot S \ln (kx) dx = F^{c}(-x \cdot \cos(kx) + \int_{L} \cos(kx) dx)$$

$$= \frac{1}{k^{2}} \cdot \left(\frac{1}{k} \cdot S \ln (kx) - \chi \cdot \cos(kx)\right)$$

$$= \frac{1}{k^{2}} \cdot \left(\frac{1}{k} \cdot S \ln (kx) - k \cdot x \cdot \cos(kx)\right)$$

Dette kan vi så indsætte ind i vores integral
$$\begin{bmatrix}
k = \frac{\pi}{L} \\
k
\end{bmatrix}$$

$$\begin{bmatrix}
k = \frac{\pi}{L}
\end{bmatrix}$$

$$\begin{bmatrix}
k = \frac{\pi}{L}$$

$$- \operatorname{Ti} \left[k \cdot c \circ S \left(k \times \right) \right]_{\frac{1}{2} \operatorname{In}}^{\frac{1}{2} \operatorname{In}} - \left(S_{1}^{1} \operatorname{In} \left(k \times \right) - k \times \cdot C \circ S \left(k \times \right) \right)_{\frac{1}{2} \operatorname{In}}^{\frac{1}{2} \operatorname{In}} \right)$$

$$b_{n} = \frac{1}{50 \, \text{cn} \, \text{Tr} \, \text{cos}} \left(\frac{k \pi}{2} \right) - \frac{k \pi}{2} \cdot \left(\frac{k \pi}{2} \right) = \frac{k \pi}{2} \cdot \left(\frac{k \pi}{2} \right)$$

$$+ Sin\left(\frac{z}{k\pi}\right) - \frac{z}{k\pi} \cdot \left(\sqrt{z}\left(\frac{z}{k\pi}\right)\right)$$

Her kan vi så indsætte k igen $c = \sqrt{11}$

$$B_{h} = \frac{1}{50cn\pi \cdot \left(\frac{n\pi^{2}}{L}\right)^{2}} \cdot \left(2 - 5in\left(\frac{n\pi^{2}}{2L}\right) - 5in\left(\frac{n\pi^{2}}{L}\right)\right)$$

Vi kan her indsætte værdierne for c og L

Eftersom at n er et hel tal og sin(pi)=sin(2pi)=0 kan vi skrive

$$B_{n} = \frac{2}{50.03 \, \text{m}} - 5i \Lambda \left(n \frac{\pi}{2}\right)$$

Vi kan nu opskrive vores løsning

$$U\left(X,+\right) \leq \frac{1}{2511} \sum_{n=1}^{\infty} \frac{1}{n^{2}} \cdot Sin\left(n + \frac{\pi}{2}\right) Sin\left(n \times x\right) \cdot Sin\left(n \cdot x\right)$$

5-8 GRAPHING SOLUTIONS

Using (13) sketch or graph a figure (similar to Fig. 291 in Sec. 12.3) of the deflection u(x, t) of a vibrating string (length L = 1, ends fixed, c = 1) starting with initial velocity 0 and initial deflection (k small, say, k = 0.01).

$$5. f(x) = k \sin \pi x$$

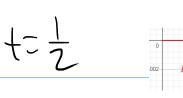

Vi bruger her D'alemberts metode til at finde u(x, t) der står i opgaven at start hastigheden er 0 hvilket betyder vi kan finde u(x, t) som:

$$V(x,t) = \frac{1}{2} \cdot \left(f(x+(t)) + f(x-(t)) \right)$$

Vi kan her indsætte dette ind i vores funktion, og c=1

Vi kan her tegne dette:

$$\begin{array}{c} -0.008 \\ \hline \\ -0.002 \\ \hline \\ 0 \\ 0.02 \\ \hline \\ 0.002 \\ \hline \\ 0.002 \\ \hline \\ 12 \\ 14 \\ 16 \\ \hline \\ -0.002 \\ \hline \\ \\ Hvis \\ \hline \\ 0 \\ 0 \\ x \\ \le 1, \\ \hline \\ \frac{0.01}{2} \left(\sin((x+0.25)\pi) + \sin((x-0.25)\pi)\right) \\ \hline \end{array}$$

Ш								
0	0.2	0.4	0.6	0.8	1	1.2	1,4	1.6
002	$Hvis \Big($	$0 \le x \le$	$\leq 1, \frac{0.01}{2}$	(sin((x	+ 0.5	(π)	in((x -	$(0.5)(\pi))$
